

Adding additional GP/Physicians when Ordering

Additional doctors can be added by request to patient imaging procedures within Agfa Scheduling in order to receive the imaging results. Please note that physicians need to be added **prior** to the images being reported to receive the results automatically.

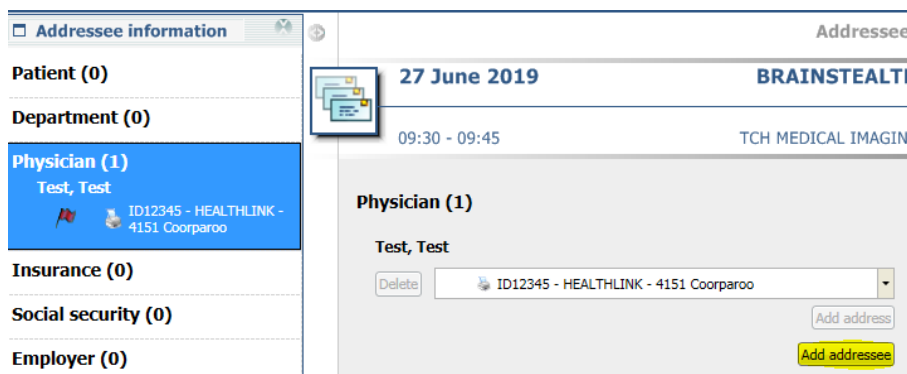

To add additional doctors who also require a report while placing an order for a patient, you must fill in appropriate procedure details and confirm the order of the patient:

Ensure the newly created procedure is highlighted in the available list. From the right-hand side panel under the 'Order' subheading, navigate to View the physicians who are receiving the results:

Highlight the 'Physician' field. From this screen, new physicians can be added as needed by clicking 'Add addressee':

In the pop-up window, search for and highlight the new physician you'd like to receive results and accept your selection:

Multiple physicians will now appear. Save the changes using the Action box:

From the Consult Overview page, it is now visible to users that multiple parties will receive the results:

Note: If a doctor requires a copy of results after a patient's procedure has been reported, the report will need to be manually printed and faxed to the doctor.
